PRAKTEK, Inc.

AERE® Inflatable Fenders

Having large fenders aboard to meet the requirements of bad docks, rafting with other boats, storms, wind and waves, is something every boat owner has wished for, but most of us just don't have space available to store the large fenders needed for those situations. **AERE®** fenders were designed for just that problem, they inflate and deflate in seconds, store easily, and are lightweight so any member of your crew can handle them.

In daily use by the US Navy, Coast Guard, Alaska Marine Highway, and most of the largest yachts afloat.

The NEW Freedom 7 Shark Shield for Boating

The Freedom 7 Shark Shield is a unique shark deterrent system that repels sharks via an electric field that induces spasms in the shark without leaving permanent damage or harming the environment.

Used by the Australian Elite Military, South African Navy, US Coast Guard, and divers worldwide, the Freedom 7 Shark Shield is optimal for recreational boaters and water sports professionals who want to enjoy peace of mind in and around the water.

When deployed the Freedom 7 Shark Shield creates a 30 foot diameter 'safe zone' for carefree swimming, snorkeling, diving and fishing. The Shark Shield can also be used as a personal unit for excursions away from the boat!

The NEW AERE[®] 3.7 Sailing Catamaran

Fun, safe easy, stable, relaxing sailing. Quick and easily assembled. Rugged and dependable. Affordable.

Stores away small and compact,
30 minutes to assemble and
15minutes to disassemble

This is the newest of the popular AERE[®] line of sailing catamarans . Designed for two people, lightweight, compact, easy and quick to assemble.

Assembles quickly, no loose parts, no tools required, and is easily carried in your garage. A good way to expand the toys you can offer your guests.

Length over all 12'
5'6"Weight 130lbs

Draft 12"
Mast 14'6"

Beam over all
Sail46sq'

2 Chambers/Hulls each with pressure relief valves
Capacity 400lbs for sailing

Shark Shield is a unique shark deterrent system utilizing a technologically advanced three dimensional electrical wave form. Shark Shield technology is available for recreational users and water sports professionals to help all people enjoy the water with a new dimension – peace of mind; for themselves, their families and employees.

Shark Shield was invented by the South African Government through the Natal Shark Board, home to some of the sharkiest waters in the world. It is used by the Australian Elite Military, the South African Navy the US Coast Guard and is also approved by NATO.

Shark Shield can be used when participating in any ocean activities including surfing, body boarding, long boarding, snorkeling, scuba diving, free diving, spear fishing, commercial diving, kayaking, ocean swimming and boating or fishing.

Shark Shield provide protection against all predatory shark species including Great Whites, Tigers, Zambezi (Bulls), Makos, Bronze Whalers, among others.

Our shark repellent products repel the sharks via an electric field that induces spasms in the sharks' snouts. It does not attract sharks to the area or leave permanent damage to the animals, or harm the environment. Our products are proven to prevent shark attacks

The electrical wave-form used in the Shark Shield is based on a technology invented by the Natal Sharks Board of South Africa.

Predatory sharks have small gel filled sacs known as 'Ampullae of Lorenzini' on their snouts. They use these short range sensors when feeding or searching for food.

Shark Shield is a three dimensional electrical wave form which creates an unpleasant sensation impacting the sharks' 'Ampullae of Lorenzini'. When the shark comes into proximity of the electrical wave form (around 8 meters in diameter) it experiences non-damaging but uncontrollable muscular spasms causing it to flee the area.

The field is projected from the unit by two electrodes, which create an elliptical field that surrounds the user. Both electrodes must be immersed in the water for the field to be created. The electrode configuration depends on the model of the Shark Shield unit.

Your first source for nautical charts, nautical books, electronic charts and much more!

WE can put you in touch with Bluewater Books and Charts.

WE can handle all your Bluewater shipment. We can order all your :-

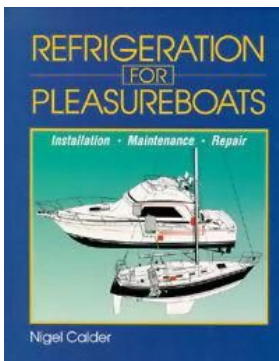

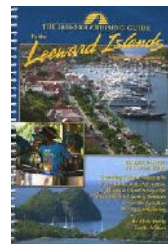

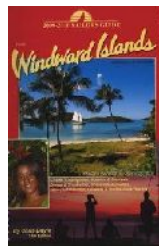

Paper charts :- **British Admiralty:** The gold standard since 1795, British Admiralty charts have built a reputation for providing safe and accurate marine navigational information around the world.. Developed for commercial mariners, these charts are used by the UK Royal Navy and merchant marine vessels worldwide to comply with the latest safety (SOLAS/MCA) regulations. They are equally useful for the recreational cruiser.

Imray Charts:- Compiled especially for the cruising yachtsman, these are colorful, waterproof, easy-to-read charts which combine privately compiled information with data from government charts. They typically display an overall area with multiple insets of popular harbors and anchorages

Electronic Charts :-Raster charts / Vector Charts / C-map / Maptech / Navtronics.

Cruising Guides :-

CHAFE GEAR

Fenda Sox®

Fenda Sox® Fender Covers. are Available in over 20 sizes, Made from heavy-duty, acrylic knitted fabric, with a draw string end. The softest and gentlest care to your delicate topsides and expensive paint work that your money can buy. You have admired these on the best and most expensive yachts in the world. Now you are able to buy them exclusively here.

The original Fenda Sox® covers are designed to protect your topsides from fender scuff and reduce the need for expensive gel coat repairs. They are made from particularly non-abrasive loop-knit acrylic fabric which is both durable and stain resistant.

They will also protect your fenders from dirt and UV and help your boat look clean and smart.

*Yacht Sox

Made from Fenda-Sox fabric with non-slip soles. Available in slipper or overshoe styles. Perfect for your boating guests.

Anti-Chafe Mooring Line Covers

Available in all standard colors and several lengths for mooring rope and power cord protection

Quickline USA

Safe and secure anchoring is all about the equipment. Quickline provides the highest quality 316L stainless steel anchoring gear that's effective and easy to use. Best of all, it delivers peace of mind.

Ultra Anchor is strong and efficient. Due to its unique self-righting design, Ultra Anchor always lands on the bottom in attack position, ready to dig deep into the bottom. Upon retrieval, the anchor's precision design also allows it to automatically right itself as it aligns onto the bow roller, thus saving time and strain on your windlass.

Ultra Flip Swivel:

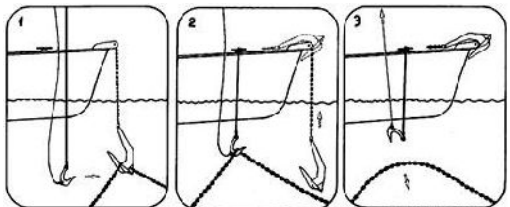

- Connects chain to anchor
- Makes easy passage of anchor over bow roller—
- WILL NOT BIND!**
- Assists in aligning anchor with bow roller
- Stainless steel swivel rotates 30 degrees before set anchor position is impacted
- Stronger than anchor chain
- Square head bolt will not rotate loose

Ultra Chain Grab is made of 316L stainless steel. Its spherical head hooks onto the anchor chain, and stays attached as the anchor chain is lowered into the sea. There is no need to lean over the pulpit to attach the chain grab...as with some of our competitors. By its special projected form, it can be easily attached and unattached from the loaded and stretched chain. It has a stroke absorbing rubber. Its hook is 316 quality stainless steel. Upon retrieval, Ultra Chain Grab simply applies the forces of gravity to disengage. The Ultra Chain Grab is sized based on the thickness of your anchor chain.

Ultra Trip Hook

helps to rescue your anchor when it is locked by another. It is made of 316 quality stainless steel.
